Food
Banking &
New Rural
Distributions

Jessica Murray
FEED Lead Coordinator

Learning Objectives

- Understand food security
- Learn how the Food Bank operates
- Hear about new rural food distributions

- Hunger = a feeling of discomfort or weakness caused by lack of food, coupled with the desire to eat.
- Food Security = the state of having reliable access to a sufficient quantity of affordable, nutritious food.

Pre-pandemic

Volunteer's Wanted

We Appreciate Your Help

- 2 hour shifts
- Each location is once per month
- Register and sign up online
- https://sdfb.volunteerhub.com/events/index

8:30 AM

Mobile Pantry Distribution-Manzanita MAC building Tue, November 9, 8:30 am - 10:30 am (2 hours)

1 10.50 am (2 moars)

2 points

11 slots remaining

SIGN UP

Help distribute food to families facing food insecurity in the Manzanita community. Clients will remain in their cars to ensure social distancing. This is an outdoor distribution so dress appropriately for the weather (consider sunglasses, sun block, rain gear, water resistant footwear, and dressing in layers as the weather may change throughout the shift). Closed toed shoes are required. All volunteers must be 16 years or older. Masks are required for unvaccinated volunteers. No court ordered volunteers. Volunteers must be able to bend, twist reach, sit and lift at least 40 pounds.

0.36

^{*}Not fully vaccinated includes individuals with one dose of the two-dose series, no doses, or unknown vaccination status. Individuals less than 12 years of age who are not yet eligible for the vaccine are also included. **Cases who first tested positive (based on specimen collection date) greater than or equal to 14 days after receiving the final dose of COVID-19 vaccine.

For more information see the <u>COVID-19 Watch</u> and the <u>Summary of Cases by Vaccination Status</u>. Prepared by the County of San Diego. Data through 10/30/2021, updated 11/3/2021.

PFIZER COVID-19 VACCINE FOR 5-11 YEAR OLDS

- The CDC and the Western States Scientific Safety Review Workgroup now recommend that children ages 5-11 be vaccinated against COVID-19 with the Pfizer pediatric vaccine.
- The Pfizer vaccine is the only COVID-19 vaccine currently authorized for use in
 5- to 11-year-olds and 12- to 17-year-olds.
- Parents should take their children ages 5 to 11 to their primary pediatrician for a vaccine, but if that is not an option, most County-operated <u>COVID-19</u>
 <u>vaccination sites</u> also carry the Pfizer vaccine, as do many pharmacies, clinics and other medical providers.
- For more information, please read the CDC's <u>media statement</u> or visit the CA.gov website.

Who is eligible to receive a COVID-19 booster dose?

You are eligible for a **Pfizer or Moderna** booster dose if you:

- Received your second dose at least six months ago, AND
- Are 65 or older, or
- Age 18+ who live in long-term care settings, or
- Age 18+ who have underlying medical conditions, or
- Age 18+ who are at increased risk due to social inequity, or
- Age 18+ who work or live in <u>high-risk settings</u>

You are eligible for a **Johnson & Johnson** booster dose if you:

- Received your first dose of the Johnson & Johnson vaccine at least two months ago, AND
- Are 18 or older

MIX AND MATCH BOOSTERS

What is "mixing and matching"?

"Mixing and matching" is getting a different COVID-19 booster than your initial vaccine.

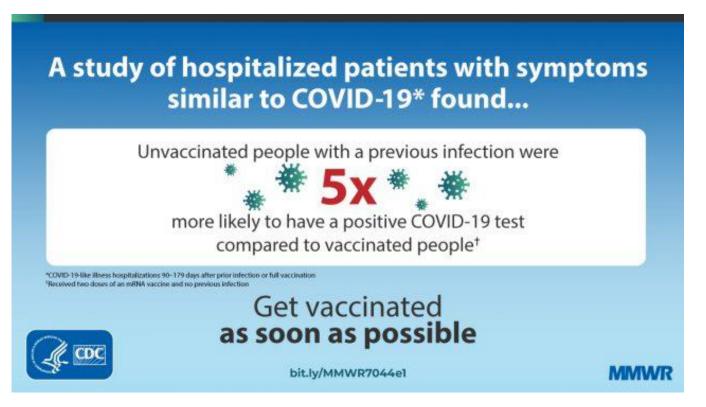

The CDC advises people to get the same booster as their initial vaccine, but allows people to mix and match if they have a different preference.

As of 10/22/2021

INFECTION-INDUCED AND VACCINE-INDUCED IMMUNITY

Science Brief: SARS-CoV-2 Infection-induced and Vaccine-induced Immunity

- The CDC released a review of more than 90 published reports and pre-print studies about COVID-19 immunity after infection and immunity from vaccination.
- The data show that vaccination can provide a higher and more consistent level of immunity to protect people from COVID-19 than infection alone.
- Vaccination after infection significantly improves protection from reinfection.

EARLY THERAPY FOR COVID-19 AVAILABLE AT NO COST

Who can benefit from monoclonal antibodies? **Treatment** Prevention People who have a positive test for People who have been in close COVID-19 and have mild to moderate contact with someone with a positive symptoms, AND test for COVID-19 **OR** at high risk of Have had COVID-19 symptoms for less exposure, AND than 10 days, AND • Are not fully vaccinated **OR** not Are at high-risk of getting very sick from expected to mount an immune COVID-19 response • Examples include: 65 years of age or older, obese, pregnant, diabetes, heart disease, and high blood pressure

Clinical studies show ≥ 70 % prevention of hospitalization and death with monoclonal antibody treatment, and ≥ 70 % prevention of transmission with monoclonal antibody prevention.

AND must be at least 12 years old

MONOCLONAL ANTIBODY REGIONAL CENTER (MARC)

WAYS TO ACCESS MONOCLONAL ANTIBODIES

- Call (619) 685-2500 with questions or to make an appointment
- For additional information visit: www.sandiegocounty.gov/COVIDHealthProfessionals
- Email us at: <u>CovidTreatment@sdcounty.ca.gov</u>
- If a skilled nursing facility is interested in monoclonal antibody treatment, contact the Mobile Monoclonal Antibody Administration Team at mcsdnursingmabinfusion.hhsa@sdcounty.ca.gov

In addition to monoclonal antibody treatment, the **Clairemont Friendship Center** can provide monoclonal antibodies for **post-exposure prophylaxis**. If you have been in close contact with someone who has COVID-19, call the Clairemont MARC site to see if you qualify to receive monoclonal antibodies.

SHIGELLA UPDATE

What is Shigella?

- Shigella is a bacteria that can easily spread from person to person and cause an infection called shigellosis.
- The most common symptoms of a *Shigella* infection are diarrhea, stomach pain or cramps, fever, and a strong urge to pass stool (poop).
- Symptoms usually start 1-2 days after contact with Shigella germs and last about a week.
- Outbreaks tend to occur in overcrowded settings where personal hygiene is challenging.

WHAT IS SHIGELLA?

How does Shigella spread?

Shigella spreads when a person gets poop from a sick person into their mouth. Even microscopic amounts of poop could make someone sick.

Hands

Getting *Shigella* bacteria on your hands then touching your food or mouth.

Food

Eating food that was prepared by someone who is sick (or recently sick) with *Shigella*.

Water

Swallowing water while swimming or drinking water contaminated with poop that has *Shigella* bacteria.

Sex

Contact with germs from poop during sexual contact with someone sick or recently sick with *Shigella*.

Groups at increased risk for shigellosis:

- Children attending daycare
- Travelers to low-income countries
- Men who have sex with men
- Persons experiencing homelessness

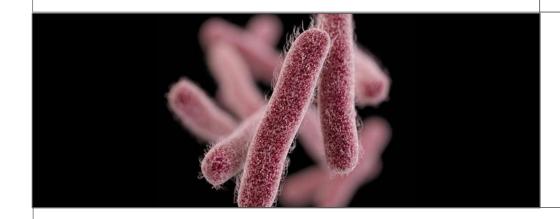

SHIGELLA OUTBREAK IN SAN DIEGO COUNTY

26 confirmed cases and 3 probable cases among persons experiencing homelessness

Onset of illness between Aug. 16 – Oct. 21

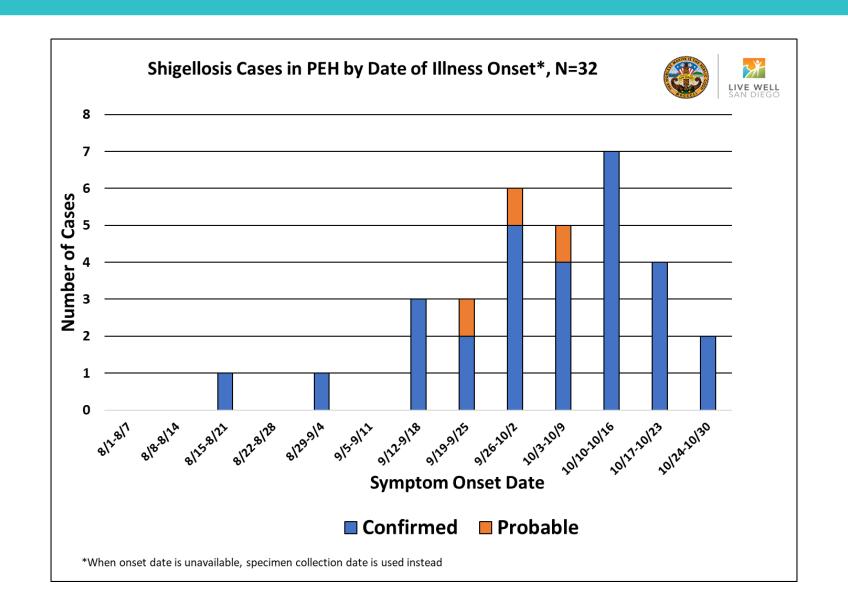

The 29 cases in this outbreak represent 9% of the 295 total cases reported to date in San Diego County

The outbreak cases are among individuals experiencing homelessness, with the majority located in central San Diego. No source of the outbreak has been identified. It is likely spreading from person to person, a common way for Shigella to spread.

SHIGELLOSIS IN SAN DIEGO COUNTY

SHIGELLOSIS IN SAN DIEGO COUNTY

PERSONS EXPERIENCING HOMELESSNESS 0 Deaths

24 Hospitalizations

28 Use Methamphetamines

PUBLIC HEALTH RESPONSE

Coordinate

- Relocation of deployed handwashing stations to areas frequented by persons experiencing homelessness (PEH)
- Outreach and education to over 20 Sectors interacting with PEH

Collaborate

- Weekly meetings with impacted municipalities and CDPH
- Sharing Shigella and sanitation best practices and materials

Communicate

- Released CAHAN (10/11/21)
- County News
 Center media
 releases: October
 11th, 19th, 21st

Response

- Active investigation of cases
- Activated Medical Operations Center (10/15/21)
- Linked PEH cases to temporary housing
- Distributed information & hygiene kits through homeless outreach teams
- Testing of cases through public health lab

HOW TO PREVENT SHIGELLA

The best way to prevent *Shigella* infection is to <u>carefully wash</u> <u>your hands</u> with soap and water after using the bathroom, before preparing food and eating, and after changing a diaper.

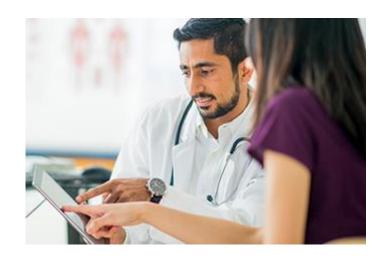

Other ways to help prevent *Shigella* infection:

- Do not prepare food or share your food with others if you are sick with shigellosis.
- Avoid swallowing water from ponds, lakes, or untreated swimming pools.
- Do not swim in water if you have diarrhea.
- Avoid having sex of any kind with someone who currently has symptoms
 of shigellosis or has had shigellosis in the past few weeks.
- When traveling internationally, stick to safe eating and drinking habits, and wash hands often with soap and water. For more information, see <u>Travelers' Health – Food and Water Safety</u>.

WHEN TO SEE YOUR DOCTOR

- Contact your healthcare provider if you or one of your family members have bloody diarrhea or severe stomach cramping or tenderness, especially if you also have fever or feel very sick.
- People with *Shigella* infection should drink plenty of fluids to prevent dehydration.
- People with bloody diarrhea should not use antidiarrheal medication, because it may make symptoms worse.
- Antibiotics can shorten the time you have fever and diarrhea, but consult with your physician first because not everyone needs antibiotics.

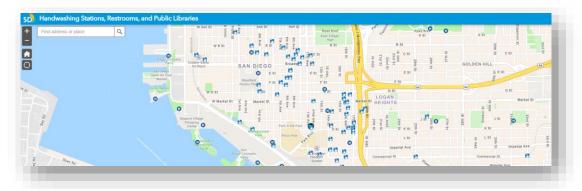

Shigella - San Diego County (data updated every Thursday)

City of San Diego Handwashing Stations, Restrooms, and Public Libraries

For more information, visit the <u>CDC Shigella</u> or <u>CDPH Shigellosis</u> websites.
